Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. ***Claims 1-18, 27-31, and 35-38*** drawn to a system and method for network access regulation, classified in class ***709/225***.
 - II. ***Claims 19-20, 22-26, 32, and 34*** drawn to a method of network computer reconfiguration, classified in class ***709/221***.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP ' 806.05(c)). In the instant case, the combination as claimed does not require the particular of the subcombination as claimed because the system and method for providing data to clients can be facilitate without a step of forwarding one of the data requests to the server for processing each time the server completes processing one of the forwarded data requests. The subcombination has separate utility such as server configuration load balancing.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2143

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
